

LONG-TERM FORECAST OF SPACE WEATHER IN REAL-TIME.

V.I.Kozlov, S.A.Starodubtsev, A.A.Turpanov et.al.
Institute of Cosmophysical Research and Aeronomy of SB RAS

The scaling character of the cosmic ray fluctuation dynamics detected in a wide interval of intensity decreases assumes the long-term (2-3 Bartels rotations) forecast of the solar sporadic activity. It is achieved by using of the cosmic ray scintillation index daily values averaged by Bartels rotations.
