

## **Calibration of the RICE detector**

D. Besson et al. (The RICE Collaboration)

Bartol Institute, Florida St. U., Kansas U., MIT, U. of Canterbury (NZ)

Using continuous wave and pulser radiowave data taken with the RICE detector (12/00-01/01) at the South Pole, we have measured and verified the overall amplitude calibration of the radio array. We have also used these data to estimate the profile of the complex dielectric constant as a function of depth and frequency. Comparison with similar measurements made on South Polar ice is discussed.
