

**THE TEV SPECTRUM AND LIGHTCURVE OF MKN 421 IN  
1999/2000 AS OBSERVED WITH THE HEGRA CHERENKOV  
TELESCOPE CT1**

**M. Kestel for the HEGRA Collaboration**

MPI für Physik, München.

The HEGRA collaboration has observed Mkn 421 in 1999/2000 for more than 200 hours, partly during moonshine. In this time some strong flares have been observed. The lightcurve and the spectrum will be presented.
